ChanukahLight

Light the Menorah automatically

The perfect solution for all electric Chanukah lights

ChanukahLight is an astronomical timer that knows all dates of Chanukah for the next 30 years.

The timer turns on the lights *"mosif ve-holech"* (adding one light every day) during Chanukah without the need of any human touch.

The timer can be installed throughout the year, and the Menorah will turn on accordingly.

- No need to climb up to turn on or screw in a bulb everyday.

- No need to connect many cables when installing the menorah.

- In fact, there's no need to be near the light in Chanukah at all!

ChanukahLight Advantages:

- Very Accurate -

  - maximum deviation of 1 minute per year within the temperature range of 0-40°C/ 32-104°F.

  - maximum deviation of 1.7 minute per year within the temperature range of -30-85°C/ -22-185°F.

- Calendar - Contains dates of Chanukah for 30 years.

- Calibration - Comes pre-calibrated to the required location.

- Easy installation -

  - installed on a standard DIN rail or by mounting screws.

  - Two separate connection points for each lamp, avoiding extra connectors or "crowded" points: no more then one conductor per point.

- Dimensions - 4.25X2.95X2.75 in | 108X75X70 mm

- Accepts Power - 85 to 265 VAC.

- Power - 0.5A current in each output – allows up to 60W lamps with no additional relay

- Test switch - confirms right connection and operation of lamps.
